4 Food management

4.1 Storing food

⚠ **WARNING**
Danger of fire
▶ Do not use electrical appliances inside the food storage compartments of the appliance, unless they are of the type recommended by the manufacturer.

Note

Insufficient ventilation results in an increase in energy consumption and reduction of the refrigerating performance
▶ Always keep the air slots unobstructed.

When storing food, remember these basic rules:
- ❏ Do not obstruct the air vents on the back wall.
- ❏ Do not obstruct the air vents on the fan.
- ❏ Food is well sealed.
- ❏ Food that easily absorbs or emits odor or taste, are in sealed containers or are covered.
- ❏ Raw meat or fish is in clean, sealed containers so that other food cannot be touched or drip on them.
- ❏ Liquids are in sealed containers.
- ❏ Food is stored spaced apart to ensure good air circulation.

Note

Failure to follow these guidelines can lead to food perishing.

4.1.1 Fridge

The natural air circulation means the temperature varies in different sections.

Arranging the food:
▶ In the top section and in the door: butter and cheese, preserves, and tubes.
▶ The coldest zone *Fig. 1 (C)* is for: easily perishable food such as prepared meals.

4.1.2 BioFresh

BioFresh allows some fresh food to be stored longer compared to conventional cooling.

Food with a "use by" date must still be consumed by the date indicated on the package

Note

If the temperatures drop below 0 °C foods may freeze to each other.
▶ Store cold-sensitive vegetables such as cucumbers, aubergines, zucchini, and cold-sensitive tropical fruit, in the refrigerator compartment.

Fruit & Vegetable-Safe 🍎 🥕 ◎

This provides a fresh storage climate with the lid closed. A moist climate is suitable for storing unsealed food with a high moisture content (e.g. salad, vegetables, fruit).

The humidity depends on the moisture content of the stored items and how frequently the door is opened. You can regulate the moisture.

Arranging the food:
▶ Place unsealed fruit and vegetables.
▶ Excessive moisture: Regulate the air humidity (see 7.11 Humidity control) .

Meat & Dairy-Safe 🧀 🥩 🐟

The DrySafe provides a relatively dry storage environment. A dry climate is suitable for dry or sealed food (e.g. dairy products, meat, fish, sausage).

Arranging the food:
▶ Place dry or sealed food.

4.1.3 Freezer compartment*

The air temperature in the compartment, which is measured with a thermometer or other measurement devices, can fluctuate. Temperature fluctuations are greater in a half-full or empty compartment, and temperatures can reach -18 °C and above.

Freezing food

You can freeze as many kilograms of fresh food within 24 hours as indicated on the nameplate under "Freeze capacity … kg/24h".

To ensure that the food freezes quickly to the core, keep to the following quantities per pack:
- Fruit, vegetables up to 1 kg
- Meat up to 2.5 kg

Before freezing, please note the following:*
❏ For maximum freezing capacity: Glass plate is removed.

Arranging the food:

⚠ **CAUTION**

There is a risk of injury from pieces of broken glass!
Bottles and cans containing drinks can split or crack when frozen. This applies in particular to carbonated drinks.
▶ Do not freeze bottles and cans containing drinks

▶ Place sealed food in the freezer so that it is in contact with the floor or the side walls.

Defrosting food

- in the fridge compartment
- in the microwave
- in the oven/fan oven
- at room temperature

⚠ **WARNING**

Danger of food poisoning!
▶ Do not re-freeze defrosted food.

▶ Remove only the food you need for now.
▶ Use defrosted food as quickly as possible
